

Table of Contents

OVERVIEW

1. INTRODUCTION

- 1.1. Overview of Steps to Estimating and Reporting Supplementary Information for Activities under Articles 3.3 and 3.4
- 1.2. General Rules for Categorisation of Land Areas under Articles 3.3 and 3.4
 - New categorization of natural disturbance
 - New activities (wetlands drainage and rewetting)
 - Issues related to reporting conversion (e.g., conversion of natural forest and carbon equivalent forest)
- 1.3. Relationship between Annex I Parties' National Inventories and Article 6 LULUCF Projects

2. METHODS FOR ESTIMATION, MEASUREMENT, MONITORING AND REPORTING OF LULUCF ACTIVITIES UNDER ARTICLES 3.3 AND 3.4

- 2.1. Relationship between UNFCCC Land-Use Categories and Kyoto Protocol (Articles 3.3 and 3.4) Land-Use Categories
- 2.2. Generic Methodologies for Area Identification, Stratification and Reporting
 - Reporting requirements
 - Reporting Methods for lands subject to Article 3.3 and Article 3.4 activities.
 - Relationship between Approaches in Chapter 2 and Reporting Methods in Chapter 4
 - Choice of Reporting Method
- 2.3. Generic Methodological Issues for Estimating Carbon Stock Changes and Non-CO₂ Greenhouse Gas Emissions
 - Pools to be reported
 - Years for which to estimate carbon stock changes and non-CO₂ greenhouse gas emissions
 - Reporting and measurement intervals
 - Choice of method
 - Factoring out indirect, natural and pre-1990 effects.
 - Disturbances
 - Interannual variability
- 2.4. Other Generic Methodological Issues
 - Developing a consistent time series
 - Uncertainty assessment
 - Reporting and documentation
 - Quality assurance and quality control
 - Verification
- 2.5. Afforestation and Reforestation
 - Definitional issues and reporting requirements
 - Choice of methods for identifying units of land subject to direct human-induced afforestation/ reforestation
 - Choice of methods for estimating carbon stock changes and non-CO₂ emissions
 - Methods to address natural disturbance
- 2.6. Deforestation
 - Definitional issues and reporting requirements
 - Choice of methods for identifying units of land subject to direct human-induced deforestation
 - Choice of methods for estimating carbon stock-changes and non-CO₂ greenhouse gas emissions

2.7. Forest Management

- Definitional issues and reporting requirements
- Choice of methods for identifying lands subject to forest management
- Choice of methods for estimating carbon stock changes and non-CO2 greenhouse gas emissions
- Methods to address natural disturbance
- Forest Management Reference Levels
- Technical Corrections
- Carbon equivalent forest

2.8. Cropland Management

- Definitional issues and reporting requirements
- Choice of methods for identifying lands
- Choice of methods for estimating carbon stock changes and non-CO2 greenhouse gas emissions

2.9. Grazing Land management

- Definitional issues and reporting requirements
- Choice of methods for identifying lands
- Choice of methods for estimating carbon stock changes and non-CO2 greenhouse gas emissions

2.10. Revegetation

- Definitional issues and reporting requirements
- Choice of methods for identifying lands
- Choice of methods for estimating carbon stock changes and non-CO2 greenhouse gas emissions

2.11. Wetland drainage and rewetting

- Definitional issues and reporting requirements
- Choice of methods for identifying lands
- Choice of methods for estimating carbon stock changes and non-CO2 greenhouse gas emissions

Annex A.1 Tool for estimation of changes in soil carbon stocks associated with management changes in croplands and grazing lands based on IPCC default data

Annex A.2 Examples of allometric equations for estimating aboveground biomass and below ground biomass of trees.
