Welcome to Zürich and to the 9th Swiss Geoscience Meeting 2011

Dear Geoscientists

We cordially welcome you to our 9th Swiss Geoscience Meeting hosted by the Department of Earth Sciences at ETH in Zürich. The SGM is co-organised by our department, the Swiss Academy of Sciences and ETH Zürich.

The first Swiss Geoscience Meeting was held in Basel in November 2003. The principal initiators of the first SGM, Stefan Schmid and his colleagues at Basel University, could not yet foresee in 2003, that their idea to offer an annual discussion platform to Swiss Geoscientists would turn into such a success story. Geoscientists from all over Switzerland and neighbouring countries have since then taken the chance to meet once a year in November for an exchange of ideas at the SGM. Geology and Geography departments from major Swiss Universities including the University of Applied Sciences in Southern Switzerland hosted the Geoscience community over the last 8 years. The success of the SGMs over the last few years was made possible thanks to the continuous support of the Swiss Academy of Sciences SCNAT and its Platform Geosciences. On behalf of the local organizing committee, I want to express my sincere thanks to Pierre Dèzes (SCNAT). His strong commitment for the SGM made it possible that we can all meet here in Zurich today.

This year, we are expecting close to 700 participants, more than 380 abstracts for talks and posters have been submitted. The Zürich Meeting starts with a special symposium on "Life and Planet Earth". This symposium reminds us how life and the physical environment have been closely interconnected throughout Earth history and it will demonstrate again that a look into the history of our planet will sharpen our eyes for future challenges of a society aiming at truly sustainable development.

Saturday is devoted to special sessions covering a broad spectrum of Geosciences including fields like Phenology and Meteorology, Structural Geology and Petrology, Geographic Information Systems and the future of Geothermal energy. Sunday is reserved for a Special Symposium in honour of the 75th birthday of Albert Matter (Bern University) and Daniel Bernoulli (ETH Zürich). Both made major contributions to the fields of sedimentology and Alpine geology over the last few decades. The speakers invited to this symposium will give us an insight into this exciting and dynamic field of research.

In the name of the organizing committee I also sincerely thank ETH Zürich for the strong support we received, and I give a warm thank you to all the many student helpers, the administrators and the technical staff of ETH who are helping us to make this meeting a success. And, last but not least, I like to thank all you participants contributing to an exciting and stimulating meeting.

On behalf of the organizing committee,

9th Swiss Geoscience Meeting, Zurich 2011

**Friday 11th to Sunday 13th November 2011:
ETH Hauptgebäude & Department of Earth Sciences,
ETH Zurich**

The 9th edition of the Swiss Geoscience Meeting will focus on the latest advances in research in geosciences. It will be held 11th to 13th November 2011 in Zurich.

The Department of Earth Sciences of the Swiss Federal Institute of Technology Zurich (ETH Zurich) and the Platform Geosciences of the Swiss Academy of Sciences (SCNAT) cordially invite you to participate in the 9th Swiss Geoscience Meeting to be held this year in Zurich.

On Friday 11th, keynote presentations will focus on this year's theme "Life and Planet Earth". **Alex Halliday** from Oxford University will start with a presentation on the birth of planet Earth, **Lee Kump** from Penn State University and author of the book "The Earth System" will trace the co-evolution of life and the physical environment, **Norman MacLeod** from the Natural History Museum in London will focus on major biotic extinctions in Earth history, **Antje Boetius** from the Max Planck Institute in Bremen will discuss how microbes survive in extreme environments. The last speaker of the symposium, **Dieter Imboden**, President of the Research Council of the Swiss National Science Foundation (SNSF) will focus on sustainability, life and planet Earth in the 21st century.

On Saturday 12th, a series of scientific symposia will cover the diverse spectrum of current research in geoscience, encompassing the lithosphere, the hydrosphere, the cryosphere, the biosphere, the atmosphere and the anthroposphere.

On Sunday 13th, a special symposium will be held in honour of the 75th birthday of Daniel Bernoulli, Professor emeritus ETH Zurich and Albert Matter, Professor emeritus Bern University. Most of the invited speakers are former students or collaborators of Dani Bernoulli and Albert Matter. The symposium will provide an overview of the state of the art both in sedimentology and sedimentary tectonics, especially with regards to the Alps and Molasse basin, as well as in paleoclimatology and paleoceanography in general. Poster submissions for this special symposium are very welcome!

The SGM also provides the ideal environment to foster informal contacts and discussion between scientists, in particular during the Swiss Geoscience Party on Friday evening but also at the poster sessions on Saturday in the main hall of the venue (*focusTerra*). Time is reserved for two poster sessions, at which the authors will be present for active discussion and feedback.

Looking forward to seeing you in Zurich!

The SGM 2011 Organizing Committee.
