Welcome to Fribourg to the 17th Swiss Geoscience Meeting 2019

Dear Participants

Welcome to Fribourg! Thank you for joining us at the 17th Swiss Geoscience Meeting organized by the Department of Geosciences of the University of Fribourg under the auspices of the Swiss Academy of Sciences. We are looking forward to a very attractive meeting with over 400 submitted abstracts and we thank all session conveners for organizing a very attractive scientific program.

We are also pleased, that the 5th edition of the Swiss Geoscience Master Congress will take place in the Geography building of the University of Fribourg on Thursday, November 21st. We hope that the close association between this congress, organized by MSc students, and SGM becomes a tradition.

The theme of this year's plenary session is "**Geoscience goes underground: understanding resources & processes**". Knowledge of the shallow and deep underground has ever-growing importance in modern society. This is especially true for Switzerland, which has a longstanding tradition of exploring the deep that was acquired over the course of decades of building tunnels throughout its territories. Hydrocarbon exploration of the Alpine Molasse Basin and the Jura fold-and-thrust belt yielded modest successes, but the public controversy regarding shale gas exploration and induced seismicity in the wake of deep geothermal exploration has highlighted the importance and the role of communication of our geoscientific knowledge to the public.

The extraction of geothermal energy, building management, and land use planning will increasingly rely on knowledge of the near and deep subsurface geology. Natural resources of the underground, such as geothermal energy (from shallow to deep), CO₂ sequestration, shale gas, reservoir technology, water exploitation, subsurface energy storage, or "classic" mineral resources will thereby play a central role in the future. Geodata, GeoBIM, GeoCIM projects, and 3D geology models will reshape future management and use of underground resources and geoscientists must not miss the opportunity to get involved. Indeed, geoscientists should reach out to politicians and the public and take a position in a debate that will become increasingly more complex.

In this plenary session, the future of subsurface planning will be discussed in a first talk. Two speakers will present progress made in understanding the deep subsurface geologic system in the frame of geothermal projects and nuclear waste repository exploration. A fourth talk will discuss the relevance of understanding the state of stress in the crust, which is a key issue in planning of many projects.

On Saturday 23rd

a series of **25 scientific symposia** will cover the diverse spectrum of current research in geosciences, encompassing the lithosphere, the hydrosphere, the cryosphere, the biosphere, the atmosphere and the anthroposphere.

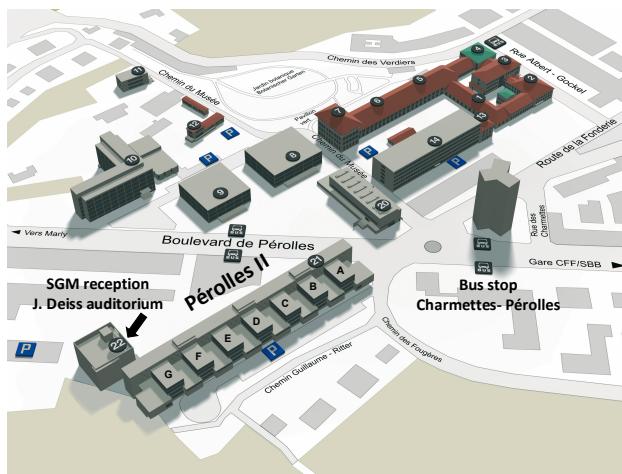

The SGM also provides the ideal environment to foster informal contacts and discussion among scientists, in particular during the Swiss Geoscience Party on Friday evening but also at the poster sessions on Saturday. Time is reserved for two poster sessions, at which the authors will be present for active discussion and feedback.

Looking forward to seeing you in Fribourg!
The SGM 2019 Organizing Committee

We hope that you enjoy our program and we wish you a great meeting! On behalf of the organizing committee
