# Welcome to Bern and to the 10<sup>th</sup> Swiss Geoscience Meeting 2012

Dear Geoscientists

We cordially welcome you to the 10<sup>th</sup> Swiss Geoscience Meeting hosted by the Institute of Geography and the Institute of Geological Sciences at University of Bern. The SGM is co-organized by our Institutes, the Swiss Academy of Sciences and the University of Bern.

This year we proudly celebrate the 10<sup>th</sup> edition of the Swiss Geoscience Meeting. Since the first SGM in Basel in 2003 the Meeting has substantially developed. The number of Symposia has grown to as many as 19 and their focus has evolved from rather earth science-centered topics to a large variety of topics, truly representative of the great diversity in geosciences. This year, the nearly 700 registered participants will have the opportunity to listen to 200 oral presentations and look at 180 posters. This unique discussion platform offers notably young Geoscientists the opportunity to present and discuss their research results with a broad audience.

The fact that Geology and Geography departments from all Swiss universities, from the Federal Institutes of Technology and from the Universities of Applied Sciences take turns in the organizing of the yearly SGM brings the institutes and their members closer together. Not only in this respect is the SGM the most significant product of the "Platform Geosciences" of the Swiss Academy of Sciences (SCNAT).

The principal theme of the Bern Meeting is "Mountains - up and down". Four distinguished key speakers will discuss this theme in the Fridays plenary session from different point of views: Celâl Şengör from Istanbul Technical University will start with a presentation on relief-building processes on rocky planets, Eric Brun from the French National Centre for Meteorological Research (Météo-France/CNRS) will discuss the influence of changing climate conditions on snowpack characteristics and on the underlying soil in mountain regions, Olav Slaymaker from the University of British Columbia will focus on mountain environment changes in the Anthropocene epoch. The symposium will conclude with a presentation by Paul Messerli, from the University of Bern, who will focus on the evolution of the cultural perception of the Alps and their significance for society through time.

On behalf of the local organizing committee, we would like to express our sincere thanks to Pierre Dèzes (SCNAT). His continuous and outstanding commitment to the Swiss Geoscience Meetings has guaranteed the long-term success of this event and made it possible that we can meet again this year in Bern. The Program Committee together with the symposia conveners are responsible for the high scientific quality of this meeting – thank you all for your commitment. We also thank the University of Bern and its technical staff for hosting this large Meeting, as well as the SCNAT for its substantial financial support. Our gratitude also goes to the members of the Local Organizing Committee for their great job in managing the logistics. A warm thank you to all the many student helpers, the administrators and the canteen collaborators who are helping us making this meeting a success. And, last but not least, we would like to thank all the participants contributing to an exciting and stimulating meeting!

For the organizing committee,

Bruno Schädler and Hans-Rudolf Egli

# 10<sup>th</sup> Swiss Geoscience Meeting, Bern 2012

**Friday 16<sup>th</sup> and Saturday 17<sup>th</sup> November 2012:  
Hauptgebäude (HG) and ExWi, University of Bern**

**The 10<sup>th</sup> edition of the Swiss Geoscience Meeting will focus on the latest advances in research in geosciences. It will be held 16<sup>th</sup> and 17<sup>th</sup> November 2012 in Bern.**

The Institute of Geography and the Institute of Geological Sciences of the University of Bern, as well as the Platform Geosciences of the Swiss Academy of Sciences (SCNAT) cordially invite you to participate in the 10<sup>th</sup> Swiss Geoscience Meeting to be held on 16<sup>th</sup> and 17<sup>th</sup> November 2012 in Bern.

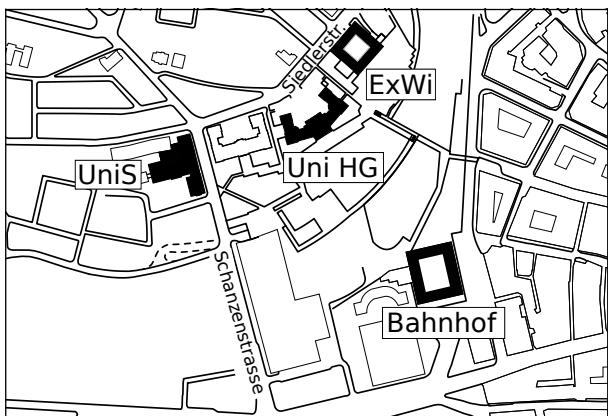

On Friday 16<sup>th</sup>, keynote presentations will focus on this year's theme «Mountains – Up and Down». Celâl Şengör from Istanbul Technical University will start with a presentation on relief-building processes on rocky planets, Eric Brun from the French National Centre for Meteorological Research (Météo-France/CNRS) will discuss the influence of changing climate conditions on snowpack characteristics and on the underlying soil in mountain regions, Olav Slaymaker from the University of British Columbia will focus on mountain environment changes in the Anthropocene epoch. The symposium will conclude with a presentation by Paul Messerli, from the University of Bern, who will focus on the evolution of the cultural perception of the Alps and their significance for society though time.

On Saturday 17<sup>th</sup>, a series of scientific symposia will cover the diverse spectrum of current research in geoscience, encompassing the lithosphere, the hydrosphere, the cryosphere, the biosphere, the atmosphere and the anthroposphere.

The SGM also provides the ideal environment to foster informal contacts and discussion among scientists, in particular during the Swiss Geoscience Party on Friday evening but also at the poster sessions in the main hall of the venue on Saturday. Time is reserved for two poster sessions, at which the authors will be present for active discussion and feedback.

Looking forward to seeing you in Bern!

The SGM 2012 Organizing Committee.
